'SUSTAINABILITY IN THE SEA: A GAZE FROM THE MEDITERRANEAN BARCELONA'

19th December 2022

The sustainability of the planet's marine spaces is one of its main challenges. Therefore, and in the context of the implementation of the 2030 Agenda and the SDGs, this Congress aims to address from an academic perspective the challenges posed by sustainability demands on the main uses of maritime spaces as well as the transformations and impact that said demands impose in economic, social, regulatory and environmental terms.

The conference will be held at the Faculty of Law of the University of Barcelona and will be structured in three successive sessions: (a) Sustainability of maritime activities in historical perspective: Barcelona and the Consulate of the Sea; (b) Sustainable and responsible tourism and transport; (c) Sustainable fishing and Blue energy. In addition to the invited speakers, each session will feature the presentation of papers selected in a competitive process.
